Summary

Senior software engineer with 10+ years shipping production iOS applications at Apple, Turo, Yelp, and Epic!, paired with recent full-stack work in TypeScript, Next.js, and React. Track record of A/B tested features that drive measurable boosts to engagement and retention. Currently building independent web tools, developer tooling, and several iOS applications.

Experience

Self-directed

09/2023 - Present

Independent Software Engineer & Founder

- Co-founded meetmimir.com with a partner; led product and engineering across full-stack web work before winding down operations.
- Maintain side projects used by hundreds across 3 websites, a Chrome Extension, and two iOS applications.
- Built a Swift Compiler Explorer (SwiftSyntax, Vapor, D3.js) that visualizes Swift's compilation pipeline through AST, SIL, LLVM IR, and assembly stages.
- Designed and built ManaDrain, a Chrome and Firefox extension that allows users to store trading cards across disparate websites into a unified cart.
- Shipped Bling Out My Deck (blingoutmydeck.com), a Next.js/TypeScript web app that allows players to see what the most expensive version of their trading card deck would look like.
- Published and maintain treachery.games, a fully featured companion iOS app and website for playing a popular variant of Magic: the Gathering, used by hundreds every week.
- Launched Claudius, an OSX application that allows a user to easily track their Claude Code usage in their menu bar. Also allows users to display this information on their Tidbyt, a popular LED display.
- Built The Lazer Dragon Workout Experience, a fun workout tracking application with an 80s, disco/retro styling.

Turo

06/2022 - 01/2023

Senior iOS Engineer

- Overhauled the host-to-guest handoff flow, streamlining a critical multi-step user experience and improving reliability through targeted photo caching.
- Redesigned the camera and photo upload flow used for filing insurance claims, lifting the rate of successful claim submissions and directly protecting host revenue.

Apple

11/2020 - 05/2022

iOS Developer, Health Strategic Initiatives

- Owned the creation and integration of an internal iOS framework built on HealthKit and CoreData, used as foundational infrastructure across multiple unreleased health applications.
- Built unreleased applications using SwiftUI, Swift Concurrency, Combine, CoreData, HealthKit, and CloudKit, working under tight design and privacy constraints typical of Apple's health products.

Yelp

11/2019 - 03/2020

iOS Developer

- Re-architected carousel views across the Yelp app to elegantly handle single-item states, improving the experience on lower-density content surfaces and reducing visual clutter.
- Redesigned and shipped Business Stories; A/B tests confirmed sustained increases in user engagement.

Epic! Digital Creations

03/2018 - 07/2019

iOS Developer

- Drove user growth and engagement on a native iOS app serving millions of young readers through a series of A/B-tested features.
- Improved subscription conversion and customer LTV by redesigning the subscription onboarding flow.

- Lifted reading and viewing engagement time by overhauling the book reader and video player experiences.
- Led major content-browsing redesigns, testing multiple layouts and producing sustained engagement gains across cohorts.
- Migrated and refactored substantial portions of the codebase from Objective-C to Swift while extending full iPad support, partnering closely with Design, QA, and PM to hit sprint commitments.

Make School

03/2017 - 02/2018

Curriculum Engineer & Lead iOS Instructor

- Led a 2-month intermediate iOS course in Oakland for 10 students — every student shipped an app to the App Store.
- Taught three beginner iOS courses in Tokyo and Osaka over a month abroad; managed instructor team, daily operations, and curriculum authorship.

Yidio

12/2015 - 03/2017

iOS Developer

- Built and maintained a cross-platform iPhone and iPad app in Objective-C and Swift.
- Implemented Yidio's first in-app purchase (Yidio Premium), opening a new recurring revenue stream.
- Shipped the “Watch Next Episode” feature, increasing user retention and re-engagement by drawing users back into the app after sessions ended.
- Redesigned movie and show detail pages, lifting ad click-through rates.

Make School

06/2015 - 08/2015

iOS Games Instructor

- Taught iOS game development to 16 students aged 13–24; every student published a game to the App Store.
- Authored curriculum covering GameCenter, Analytics, iAd, and the full App Store submission process.

Open Source Projects

Treachery · <https://treachery.games>

A companion app for the multiplayer Magic: The Gathering variant that brings the Treachery format to your phone.

Swift iOS Firebase React

The Lazer Dragon Workout Experience · [https://github.com/nsluke/Lazer-](https://github.com/nsluke/Lazer-Dragon-Workout-Experience)

Dragon-Workout-Experience

An iOS workout app with a fun 80s retro theme.

Swift iOS

Claudius · <https://github.com/nsluke/Claudius>

A macOS menu bar app that tracks your Claude API usage in real-time. See spend, token counts, and usage trends at a glance without leaving your workflow.

Swift macOS Menu Bar

ManaDrain · [https://chromewebstore.google.com/detail/manadrain-mtg-shopping-](https://chromewebstore.google.com/detail/manadrain-mtg-shopping-li/kiappkeljeebfeaijnnooichjpajeocif)

li/kiappkeljeebfeaijnnooichjpajeocif

A browser extension for Chrome and Firefox that lets you save Magic: The Gathering cards to a shopping list while browsing. Quickly stash cards you want to buy later.

TypeScript Chrome Extension Firefox Extension Manifest V3

Bling out my deck · <https://blingoutmydeck.com>

Find the most expensive printing of every card in your MTG deck. Integrates the Scryfall API to surface alternate art printings.

TypeScript Next.js Scryfall API

PushPush · <https://github.com/nsluke/PushPush>

The very first iOS game I ever built. A simple but addictive pushing game written in Objective-C. Still holds up after all these years.

Objective-C iOS

Swift Compiler Explorer

Visualizes Swift's compilation pipeline through AST, SIL, LLVM IR, and assembly stages.

SwiftSyntax Vapor D3.js
